Keeping You Connected

Driving down the highway or parked for the night Internet In Motion is always on and ready to go when you are. Internet In Motion keeps you connected with family, friends, coworkers, and the rest of the world. It's like having your own personal Wi-Fi hotspot wherever you go.

Versatile access for a mobile world

Now you can send emails, surf the net, shop on line, access databases, make reservations, access on-line financial services to pay bills or check stock prices, and even search for directions if you've wandered astray. Internet In Motion gives you high-speed upload and download so you can send photos and other files quickly. If you are running a business, you'll have all the on-line services you need. Internet In Motion also provides remote security and monitoring, so you can access surveillance video and alarm systems at home or office while you're away.

High-speed access that's always on

Internet In Motion is fast. It's up to four times faster than dial-up, and faster and more versatile than an Aircard. Unlike Satellite systems, which need to be stationary, Internet In Motion keeps you connected while you are on the move. There is nothing else like it.

Simple to use

Internet In Motion works just like the broadband connection at your home or office. Just connect your laptop, or desktop computer, and you are up and running.

Driving down the highway you are automatically connected to the cellular network. You can even take your laptop outside your vehicle, and work at a nearby picnic table or sit on an old tree stump if that's your style.

Security for peace of mind

Internet in Motion's built-in firewall protects you from hackers, and eavesdroppers. You can also install video surveillance cameras or system monitoring alarms to protect your vehicle while you are away.

Dependable and efficient

Internet In Motion consists of a cellular router that is connected to the airwaves through a high-gain antenna, each specially designed for the mobile world. Once installed in your vehicle, you won't even know it is there. A monthly service fee keeps you connected.

Quick and easy installation

Internet In Motion can easily be installed in any vehicle. In fact, many new models are already equipped. Internet In Motion can also be retrofitted in any existing vehicle. For more information, contact your dealer or visit our website at www.InternetInMotion.net.
